Dear Abhay Kondalkar,

As per our communication, kindly find the JD and details below :

Kindly find the JD attached.

**About us:**

We are product engineering and IT services multinational company established in 2011 and successfully running since last 13 Years. We are American based company and the headquarter is in Milpitas, USA. Our offices are also located in Sweden, Singapore and Bangalore, Hyderabad, Chennai, Pune, and Jodhpur in India. We are working on multiple domains like Embedded, Semiconductor, IOT, AI & Data Science, 5G services etc.

<https://spanidea.com/>

**About Client:** PHI commerce ([www.payphi.com](http://www.payphi.com)) – A fintech company – One of the Largest Payment Networks .

Work Location: Pune (Yerwada ) - Commerzone IT Park ,

Work Mode: Work from Office 5 days

Experience-2-5 Years

**Job Description**

**Job Summary:**

We are seeking a detail-oriented **Manual Tester** with strong skills in SQL, Unix, Postman, JavaScript, API Testing, and Database Testing, specifically within the payment gateway domain. The ideal candidate will be responsible for end-to-end functional testing of payment systems, ensuring accuracy, security, and reliability in transaction processing.

**Key Responsibilities:**

- Perform manual testing of payment gateway applications and APIs.
- Design and execute detailed test cases, test plans, and test scenarios based on business and technical requirements.
- Conduct API testing using tools like Postman, validating request/response payloads, headers, status codes, and authentication flows.
- Use SQL queries for database validation, data integrity checks, and backend testing.
- Work with Unix/Linux systems for server-side log analysis, deployment validation, and process monitoring.
- Participate in integration, system, and regression testing cycles.

- Report and track bugs in bug tracking systems (e.g., JIRA).
- Collaborate closely with developers, business analysts, and other QA team members to ensure high product quality.
- Contribute to test documentation and knowledge sharing.

Required Skills:

- Manual Testing – Strong understanding of SDLC/STLC, test case creation, execution, and defect life cycle.
- SQL – Proficient in writing complex queries for data validation and verification.
- Unix/Linux – Comfortable with command-line tools, log analysis, and shell navigation.
- API Testing – Experience using Postman or similar tools to test RESTful APIs.
- JavaScript – Basic scripting skills to validate UI behavior or automate small tasks (optional but preferred).
- Database Testing – Deep understanding of relational databases, data mapping, and backend processes.
- Payment Gateway Domain – Familiarity with online transactions, payment methods, settlement cycles, PCI compliance, and fraud detection (highly preferred).
- Knowledge of tools like JIRA, Confluence, TestRail, etc.
- ISTQB or similar testing certification (optional)

- **Kindly send across your acknowledgement along with below details**
